

Jennings Station Road Demolition Package

The O6ENV crew recently completed a demolition package for the St. Louis Metropolitan Sewer District. This project consisted of the asbestos abatement and demolition of nine residential properties in St. Louis County. Rapidly deteriorating conditions of two structures were demolished as a wet demolition to capture all ACM debris.

This contract was successfully completed within the past week ahead of the proposed schedule. Throughout the project, O6 Environmental utilized local disadvantaged subcontractors and exceeded the District's minority participation goals.

At the completion of this project, O6ENV crews turned nearly a full city block, which was once occupied by dilapidated structures, into a clean green space. This area will now absorb rainfall and watershed that previously would have been directed into the existing drainage infrastructure. We appreciate the opportunity to work with the District and thank all of those who were instrumental in another safe and successful project.

O6ENV is a Missouri and Illinois licensed asbestos abatement contractor and performs demolition of structures and tanks on a regular basis. Please contact us today for your environmental service needs.
